Abstract

Water processing device

- The invention proceeds from a water processing device which is provided for
- 5 removing micro-pollutants, in particular medicaments, from water, said device comprising at least one housing (48a - 48d) and at least one adsorption unit (18a - 18d) which is arranged in the housing (48a - 48d) and which at least partially adsorbs the micro-pollutants in at least one operating state and which comprises at least one non-specific adsorption element (50a - 50d).
- 10 It is proposed that the adsorption unit (18a - 18d) comprises at least one specific adsorption element (52a - 52d).
