

**SEGMENTATION METHOD, SEGMENTATION SYSTEM AND
NON-TRANSITORY COMPUTER-READABLE MEDIUM**

ABSTRACT OF THE DISCLOSURE

The present disclosure relates to a segmentation method, a segmentation system and a non-transitory computer-readable medium. The segmentation method includes steps of: receiving captioning information, wherein the captioning information includes a plurality of captioning sentences; selecting the captioning sentences according to a default value and dividing the selected captioning sentence into a first paragraph; performing a common segmentation vocabulary determination for a first captioning sentence; wherein the first captioning sentence is one of the captioning sentences; and generating a second paragraph or merging the first captioning sentence into the first paragraph according to a determination result of the common segmentation vocabulary determination.
