

ABSTRACT

MANAGEMENT SYSTEM

A management system includes a card distributing device that determines a win/loss result of a game using chips on a game table, a dealer chip determining device that specifies type and the number of chips held in a chip tray, a measuring device that measures position, type, and the number of chips on the game table, and a management control device that has a function of transmitting a signal or performing display on a display device depending on a comparison result between a collection amount and an increase amount and a comparison result between a payment amount and a decrease amount, and changes the signal or an output content of the display depending on a content of inconsistency when the inconsistency is determined in the comparison results.
