

ABSTRACT**FABRIC HAVING A SHEET OF REINFORCEMENT THREADS, AND
AWNING COMPRISING SAID FABRIC**

5

The invention relates to a fabric which comprises two parallel selvages, can be wound onto itself in at least one winding direction running parallel or perpendicular to said parallel selvages, is to be kept taut and comprises a support layer (5) that has a front face and a rear face, characterized in that the fabric
10 includes at least two sheets, i.e. a first sheet and a second sheet, one of which is arranged on top of the other and which consist of reinforcement threads (1, 2), said sheets being arranged on the rear face, the reinforcement threads (1, 2) extending at angles (α_1 , α_2) of 5 to 85° relative to the winding direction, said angles (α_1 , α_2) being symmetrical in relation to the winding direction.
