

ABSTRACT

ELECTRONIC MAIL ERRONEOUS TRANSMISSION PREVENTION SUPPORTING
DEVICE AND ELECTRONIC MAIL ERRONEOUS TRANSMISSION PREVENTION
5 SUPPORTING METHOD

When an electronic mail is transmitted, a computer
outputs to a display device a transmission confirmation screen
on which a destination or an attached file name is displayed,
10 the destination or the attached file name being different from
a destination or an attached file name that has been set by a
user in the electronic mail, and on which whether transmission
of the electronic mail will be performed is selectable. Upon
receipt of selection of whether the transmission will be
15 performed, the computer outputs to the display device message
information that varies according to a result of the selection
of whether the transmission will be performed on the
transmission confirmation screen.
