

MEDICINE PREPARED FROM ORGANOGERMANIUM COMPOUND AND GLUCOSAMINE COMPOUND, AND USE THEREOF

ABSTRACT

A medicine prepared from an organogermanium compound and a glucosamine compound, and a use thereof, are characterized in that: (1) a high water-soluble salt medicine prepared from the organogermanium compound and the glucosamine compound, which is suitable for being prepared into various advantageous pharmaceutical dosage forms; and (2) the salt medicine retains the biochemical properties, pharmacological properties and medical efficacies of the components thereof. Moreover, because the pharmacological properties of the components thereof are medically complementary, the medicine has excellent effects in numerous medical uses including but not limited to wound healing.
