G00002

Summary

5 Procedure and arrangement for photographing a vehicle, with which an image document (front photo) is produced, which is suitable for clearly identifying both the driver and the license plate and is protected against manipulation.

10 With a single photograph two geometrically identical images of different intensity are produced simultaneously and offset relative to each other on the photographic medium which can be both a wet film and an electronic sensor arrangement. The advantage of the arrangement is that it consists of a conventional camera used for traffic photography and a lens adapter.
