(54) Title: COMMAND INPUT FOR REMOTE SUPERVISION OF MULTIPLE AUTONOMOUS AIRCRAFT

(57) Abstract: Embodiments provide an animated graphical user interface for simultaneously monitoring multiple autonomous aircraft. More specifically, techniques disclosed herein provide a GUI that allows for one-to-many supervision where a remote supervisor (e.g., human or artificial intelligence) may continuously monitor and/or interact with a plurality of autonomous aircraft. For example, the autonomous aircraft may include one or more autonomous electric vertical takeoff landing (eVTOL) aircraft. Embodiments provide command input system and techniques that reduce human error by assigning an input mechanism and a command input menu to a unique flight parameter.
