

Medicament containing sofipironium bromide

ABSTRACT

A pharmaceutical formulation for applying as an external application to the surface of the human body, in which decrease of viscosity during long-term storage is suppressed, and which contains sofipironium bromide, a water-soluble polymer, and ethanol, has a pH of 5.2 or lower, and is a uniformly dispersed, and non-aqueous formulation or low water content formulation with a water content of 5% or lower.
