ABSTRACT

VERSION MANAGEMENT METHOD AND APPARATUS FOR LARGE LANGUAGE MODEL, DEVICE, AND MEDIUM

Provided are a version management method and apparatus for a large language model, a device, and a medium. The method includes acquiring version information and metadata that correspond to a large language model training task in a target tenant, where the version information includes timestamp information and region information, and the metadata includes performance indicator data; determining a version rollback strategy of the large language model according to the timestamp information, the region information, and the performance indicator data; and performing a version rollback operation on the large language model according to the version rollback strategy to complete a version rollback of the large language model.
