(54) Title: A FOLDING SCOOTER AND A METHOD OF FOLDING THE FOLDING SCOOTER

Fig. 1

(57) Abstract: The folding scooter consists of the front frame (1) of the front wheel fitted with folding handlebars (2). It further comprises the middle frame (3) fitted with the deck (4) and the rear frame (5) of the rear wheel, where the front frame (1) and the rear frame (5) are mechanically joined to the middle frame (3) for converting the folding scooter between the folded state for transport and the unfolded state for riding. The essence of the invention consists in that the front frame (1) is connected to the middle frame (3) by the mechanical joint (6), that the rear frame (5) is connected to the middle frame (3) by the mechanical joint (6), and that at the same time the mechanical joints (6) of the front frame (1) and the rear frame (5) can be folded to the sides of the folding scooter.
