

SYSTEM AND METHOD FOR PROVIDING GUIDE INFORMATION

Abstract

The invention relates to a system for providing guide information, comprising: a guide terminal which receives a selected site based on a user input; and a guide server which
5 generates guide information based on the selected site received from the guide terminal and guide terminal identification information, and transmits the generated guide information and address information, which was rendered accessible by means of the guide information, to the guide terminal. The guide terminal provides the address information to a mobile communication terminal.
