(54) Title: NETWORK MANAGEMENT SYSTEM CONFIGURING

(57) Abstract: The invention relates to a network management system (12) and a method therefore, in a broadband network, configuring (1, 2, 3) and updating network elements (14) through a command language. A difference file (20) is created for new configuration versions in the element (14). Deployment of the new configuration version in the network element is thus performing configuration updating on network elements (14) utilizing the main part of earlier configuration software.

For two-letter codes and other abbreviations, refer to the "Guidance Notes on Codes and Abbreviations" appearing at the beginning of each regular issue of the PCT Gazette.
