

FILTRATION MEMBRANE UNIT, HOLDER HOLDING SAME, FILTRATION
SYSTEM INCLUDING FILTRATION MEMBRANE UNIT AND HOLDER, AND
FILTRATION TREATMENT APPARATUS INCLUDING PLURALITY OF
FILTRATION SYSTEMS

ABSTRACT

A filtration membrane unit 21 includes a filtration membrane 22 and a suction side socket 23 fixed to an end on one side in a longitudinal direction of the filtration membrane 22 in order to hold the filtration membrane 22 on one side in the longitudinal direction, in which the suction side socket 23 extends in a lateral direction of the filtration membrane 22 in a state of being fixed to the end, and the suction side socket 23 includes a recess into which the end is inserted, a flow path communicating with the recess and extending in an extending direction of the suction side socket 23, and a discharge port for discharging a filtrate in the flow path, in which the suction side socket 23 includes, as the discharge port, a first outlet (provided at a first protrusion 23b) disposed on one side in the extending direction with respect to a center in the extending direction of the suction side socket, a second outlet (provided at a second protrusion 23c) disposed on another side in the extending direction with respect to the center in the extending direction of

the suction side socket 23.
