COMMUNICATION METHOD AND COMMUNICATION APPARATUS

ABSTRACT

This application provides a communication method, including: An SBP responder sends, to a sensing responder, a sensing measurement request frame for requesting to perform sensing measurement; and in a process of the sensing measurement, if the sensing responder moves, the sensing responder sends, to a sensing initiator, first indication information indicating that the sensing responder moves. In this way, the SBP responder can learn of a mobility status of the sensing responder in time in the process of the sensing measurement. A procedure of the sensing measurement is adapted to a device movement scenario.
