SYSTEM AND METHOD FOR FACILITATING GOODS OR SERVICE RELATED ACTIVITY

ABSTRACT

A system and method for facilitating goods or service related activity is disclosed. The system for facilitating goods or service related activity may comprise a database storing goods or service related information which is provided by at least one provider; and a processor operable to receive a request associated with the goods or service related activity from a requester; wherein the processor is operable to analyse a plurality of routes that the at least one provider can provide the goods or service to the requester, using the goods or service related information, in order to select at least one route among the plurality of routes; and match the requester with a provider associated with the selected route.
