(54) Title: APPARATUS FOR RETINA PHOTOTHERAPY

FIG. 1

(57) Abstract: A retina phototherapy system having a substantially horizontal working surface with an adjustable, ergonomic headrest assembly. A retina phototherapy device is adjustably disposed on the working surface and generally includes laser optics, a camera, a flat screen monitor, and a control joystick. The laser optics are oriented generally in the direction of the headrest assembly and are configurable so as to focus on a retina of a person using the headrest assembly. The camera is generally coaxially disposed with the laser optics and connected to the monitor so as to project an image of the retina treatment area. The control joystick is configured to micro-adjust a position of the retina phototherapy device in relation to the working surface.
