[CLAIMS]

What is claimed is:

[Claim 1]

A polyethylene-based resin packaging material which is for a garbage bag, a shopping bag, a fashion bag, a storage bag, or a packing bag, formed from a resin composition comprising an inorganic compound and a resin component, wherein:

the inorganic compound is calcium carbonate;

the resin component consists only of an ethylene-α-olefin copolymer A which is obtained by copolymerizing ethylene and an α-olefin having 6 to 8 carbon atoms, in which a melt flow rate is 0.8 g/10 min or more and 4.0 g/10 min or less, and high-density polyethylene having a density of 0.942 or more and 0.970 or less,

a content of the inorganic compound is 30% by mass or more and 50% by mass or less with respect to a total mass of the resin composition,

a content of the ethylene-α-olefin copolymer A is 55% by mass or more and 95% by mass or less with respect to a total mass of the resin component, and

a content of the high-density polyethylene is 5% by mass or more and 9.6% by mass or less with respect to the total mass of the resin component.
