(54) Title: METHOD AND APPARATUS FOR CUT, COPY, AND PASTE BETWEEN COMPUTER SYSTEMS ACROSS A WIRELESS NETWORK

(57) Abstract: A user graphically selects a portion of text of a first document stored on a first computer system, and chooses "Copy Export" from the edit menu. The user is then presented with a list of computer systems coupled to a wireless network and, from that list, selects a second computer system to which the selected portion of text on the first computer system is to be exported. The selected portion of text is then made available to the wireless network by sending a wireless signal from the first computer system to the second computer system indicating that the data is ready for transmission. The user identifies a location in a second document stored on the second computer system by properly positioning the cursor of the second computer system in the second document, and chooses "Past Import" on the second computer system. A wireless signal is then sent from the second computer system to the first computer system requesting that the data be transmitted. In response, the first computer system wirelessly sends the data to the second computer system. The received text portion is then inserted into the second document at the identified location.
