(54) Title: IMPROVEMENTS IN AND RELATING TO AUDIO DEVICES

(57) Abstract: Apparatus for use with a loud speaker with a volume control function, the apparatus having a recess for releasably receiving an audio device, a first connector on the apparatus for electrical connection with a second connector of the audio device to enable functional connectivity between the apparatus and the audio device, the apparatus including: (a) a volume control for controlling the volume of the loud speaker, (b) an electrical power connector for supplying electric power to the audio device, and (c) at least one functional connection for functional connection with the audio device for establishing a functional relationship between the first control means and the audio device, the recess being sized and shaped to receive therein the audio device, the recess being of dimensions such that the audio device does not extend beyond edges of the recess when the audio device is functionally engaged in the recess and the first connector and the second connector are engaged.
