(54) Title: FOOD CUTTER AND METHOD OF CUTTING FOOD

FIG. 1

(57) **Abstract:** A food cutter has a food travel axis, a blade carrier, and a plurality of disc blades mounted to the blade carrier. Each of the plurality of disc blades defines a corresponding blade rotation axis. Each disc blade is rotatable relative to the blade carrier about the corresponding blade rotation axis, which is perpendicular to and offset from the food travel axis. Each disc blade has a perimeter edge at a constant radius from the corresponding blade rotation axis. The perimeter edge of each disc blade has a series of alternating peaks and valleys, which have an amplitude in a direction parallel to the corresponding blade rotation axis. Other methods and apparatus are also disclosed.
