Configurable Multi-Lingual Advisory System And Method Thereof

ABSTRACT

The present invention provides a configurable multi-lingual advisory system (**100**). The advisory system include a database (**110**) a rule builder (**120**) and a rule analyzer (**130**). The rule builder (**120**) operationally receives and processes pre-defined inputs (**160**) for storing in the database (**110**). Upon receiving attribute value inputs **(170)**, the rule analyzer (**130**) processes the attribute value inputs **(170)** based on the pre-defined input (**160**) and outputs an advisory report (**150**) according to an expert domain.
