

ABSTRACTCHIP FUSE

A chip fuse is disclosed which includes a hollow insulating body (1), a fusible element (4) extending along a hole (3), the respective ends thereof engaged with the end portions of the body, and two terminals (6) fitted onto the end portions of the body, each terminal including a projection (8) for fixing the terminal to the end portion of the body. The body (1) may include two grooves (5) into which respective projections are fitted.

To be accompanied when published by Figure 1 of the drawings.
