

ABSTRACT

The present application provides a decoding processing method and apparatus, a computer device, and a storage medium. The decoding processing method comprises: in the process of hard decoding first multimedia data, acquiring the running state of a decoder, the running state comprising an operating state or an idle state (S110); if the decoder is in the idle state, acquiring second multimedia data, the second multimedia data being obtained by copying the first multimedia data (S120); and in the idle state, decoding the second multimedia data by using the decoder (S130).
