ABSTRACT

METHOD AND SYSTEM FOR FACILITATING A DEAL BETWEEN A CONSTRUCTION CONTRACTOR AND A CONSTRUCTION MATERIAL SUPPLIER

The present invention allows the deal between the contractor and the supplier to be facilitated via the contractor system, or client system, and the steel product supplier system, or the server system. The server system includes a server engine, a client ID/customer/password table, various Web pages, a customer database, a order database, a consolidated quantities database, and a progress database. The client system includes a browser which is used to access the server system. By accessing the server system, the contractor is able to access up-to-date status of the orders, the progress of the project and deliveries.
