

ABSTRACT
METHOD OF MAKING POLYURETHANE FOAM

- A polyurethane foam suitable for use as a wound-contact
5 layer in a wound dressing is made by mixing 1 part by weight
of an isocyanate-capped prepolymer having from 0.5 to
1.2 meq NCO groups/g with from 0.4 to 1.0 parts by weight of
water in the presence of from 0.05 to 0.4 parts by weight of
a C₁ to C₃ monohydric alcohol, and then drying the product.
10 The monohydric alcohol is preferably methanol, and the
isocyanate-capped prepolymer is preferably an
isocyanate-capped ethyleneoxy/propyleneoxy copolymer.
