(54) Title: CODED MULTISOURCE MEDIA FORMAT (CMMF) INSTANTIATION FOR TRANSPORT OF MEDIA DATA

FIG. 21

(57) Abstract: An example device for retrieving media data includes a memory configured to store media data; and a processing system including a decoder implemented in circuitry, the processing system being configured to: retrieve a manifest file indicating a plurality of network locations for at least a first segment of media data and a second segment of the media data, the plurality of network locations each being hosted by separate physical server devices; retrieve at least a first portion of the first segment from a first network location of the network locations; retrieve at least a second portion of the second segment from a second network location of the network locations; and provide the at least first portion of the first segment and the at least second portion of the second segment to the decoder.
