(54) **Title:** ASSIGNMENT OF PRIMARY AND SECONDARY SYNCHRONIZATION CODE SEQUENCES TO CELLS IN A WIRELESS COMMUNICATION SYSTEM

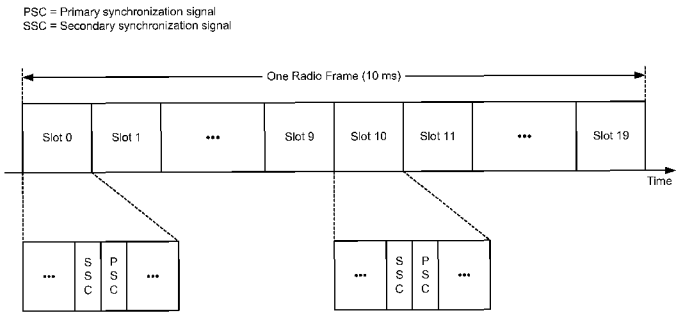

FIG. 2

(57) **Abstract:** Techniques for assigning primary synchronization code (PSC) sequences and secondary synchronization code (SSC) sequences to cells in a wireless communication system are described. At least one PSC sequence and multiple SSC sequences may be used for multiple cells in a Node B. In one design, the available SSC sequences in the system may be arranged into groups, with each group including M different SSC sequences. Additional groups of M SSC sequences may be formed with different permutations (e.g., different cyclic shifts) of each group of M SSC sequences. In one design, three SSC sequences $SSC(G_1)$, $SSC(G_2)$ and $SSC(G_3)$ may be used for three cells in one Node B. A first permutation including $SSC(G_3)$, $SSC(G_1)$ and $SSC(G_2)$ may be used for three cells in another Node B. A second permutation including $SSC(G_2)$, $SSC(G_3)$ and $SSC(G_1)$ may be used for three cells in yet another Node B.
