(54) Title: LOADING TURNTABLE SYSTEMS AND METHODS

FIG. 1

(57) Abstract: An attraction loading system is provided that includes a loading platform. The loading platform includes a rotational portion configured to rotate about a central vertical axis of the loading platform and a stationary portion extending between a first edge and a second edge of the loading platform. The first edge and the second edge of the stationary portion include respective interfaces of the stationary portion with the rotational portion. The rotational portion rotates from the first edge to the second edge. The attraction loading system further includes a loading path disposed about a circumference of the loading platform.
