

ORDER PRINTING METHOD AND SYSTEM, AND STORAGE MEDIUM

ABSTRACT

Embodiments of this specification provide an order printing method and system, and a storage
5 medium. In the method, a POS device receives a plurality of orders from a plurality of platforms,
and generates to-be-printed content corresponding to a target material based on order content of
the target order. Then, the POS device sends the to-be-printed content to a printing device by using
a digital image, so that the printing device prints the digital image. An instruction set of the printing
device is not specifically adapted to instruction sets of all the plurality of platforms.
