

ABSTRACT

A footwear includes a footbed 10, a front strap part 21, and a strap 20, in which the footbed 10 has a two-layer structure including an upper layer 11 and a lower layer 12, 5 the upper layer 11 has an upper surface, a lower surface, and a plurality of peripheral wall surfaces, the peripheral wall surfaces include a first wall surface 11f extending between an inside side surface 10a and an outside side surface 10b of the footbed 10 on a heel side relative to 10 terminating ends of the strap 20, a second wall surface 11g extending from an end of the footbed on a tiptoe side along a longitudinal direction and extending in an arc to the outside side surface 10b of the footbed 10 through an outer side than the front strap part 21 and further through a 15 tiptoe side relative to a terminating end of an outer side strap part 22b, and remaining wall surfaces, and the remaining wall surfaces have a same shape as a contour shape of the lower layer 12. An upper surface of the upper layer 11 has a horizontal part 11e located on a heel side 20 relative to a region on which an adductor hallucis transverse head abuts, and an inclined part 11d inclined upward from a front edge 11j of the horizontal part 11e toward a tiptoe side, and a lower surface of the upper layer 11 has a reverse-side inclined part 32c gradually 25 inclined downward toward a tiptoe side.
