(54) Title: TUBING CONNECTOR

(57) Abstract

A tubing connector for joining the ends of two lengths of expandable tubing (10, 11) comprises two expandable tubular portions (16, 17) for mounting on the ends of the lengths of expandable tubing. Each portion (16, 17) includes a plurality of circumferentially spaced couplings (20, 21) for engaging corresponding couplings on the other portion. The engaging parts of the couplings (24, 25) are located on parts of the tubular portions which are substantially undeformed following expansion of the tubular portions.
