

ABSTRACT

A transport apparatus (1) is attached to a bed (10) having casters and one end in a lengthwise direction supported by an operator (100). The transport apparatus (1) includes first
5 and second mecanum wheels (21R, 21L), first and second motors (22R, 22L) respectively connected to the first and second mecanum wheels, an operation unit (3) that receives an input of a moving direction, and a controller (4). When a lateral moving direction is inputted to the operation unit (3), the controller (4) operates the first and second mecanum wheels (21R, 21L) to move the bed (10) in the inputted lateral moving direction while turning the bed about a
10 rotation center (Oz) located at the one end.
