

METHOD AND DEVICE FOR CONTROLLING RRC STATE, AND COMPUTER STORAGE MEDIUM

ABSTRACT

Disclosed are a method and device for controlling an RRC state, and a computer storage medium. The method comprises: a terminal device transmits a first RRC message to a network device, the first RRC message comprising an RRC connection recovery request message; the terminal device receives a second RRC message transmitted by the network device, the second RRC message carrying first indication information, the first indication information being used for indicating a target RRC state of the terminal device; and the terminal device enters the target RRC state on the basis of the first indication information.
