(54) Title: TRANSPORT TABLE AND METHOD FOR THE USE THEREOF

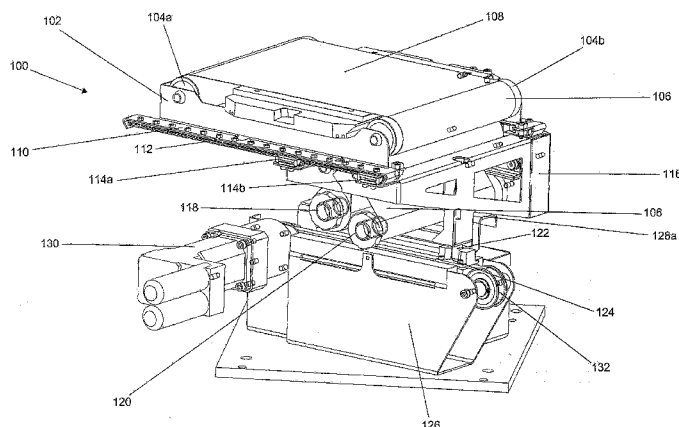

FIG. 1

(57) Abstract: A transport table (100), comprising a transport web (106); an unwinding roller (118) for unwinding the transport web (106) therefrom; a first return element (104a); a second return element (104b); a winding roller for winding thereon the unwound transport web (120); a first frame (102) with which the first and the second return element (104a, 104b) are connected; and a second frame (116) with which the unwinding roller (118) and the winding roller (120) are rotatably connected, wherein the unwinding roller (118), the winding roller (120) and the return elements (104a, 104b) together are designed for stretching the transport web (106) such that between the first and the second return element (104a, 104b) a surface of the transport web (106) is available as transport surface (108), and wherein the second frame (116) is movable along a path substantially parallel to said transport surface (108) with respect to the first frame (102). The invention also discloses a method for the use of the transport table.
