FACTOR XII (F12) IRNA COMPOSITIONS AND METHODS OF USE THEREOF

ABSTRACT

The present invention relates to RNAi agents, e.g., double stranded RNA (dsRNA) agents, targeting the Factor XII (Fl 2) gene. The invention also relates to methods of using such RNAi agents to inhibit expression of an F12 gene and to methods of preventing and treating an F12- associated disorder, e.g., heredity angioedema (HAE), prekallikrein deficiency, malignant essential hypertension, hypertension, end stage renal disease, Fletcher Factor Deficiency, thromboembolic disease, inflammatory disease, or Alzheimer's Disease.
