

ABSTRACT

A server may exchange data with a plurality of scene equipment. The server acquires a registration request sent by a scene equipment. The server groups the scene equipment according to group identification information in the registration request, acquiring a plurality of groups. The server manages scene equipment of a group in the plurality of groups uniformly according to to-be-processed data reported by the scene equipment of the group. The to-be-processed data include at least one of operating state data or scene data.
