

ABSTRACT

INFORMATION OUTPUT APPARATUS

5 To realize a user-friendly medium and information output thereof
by defining a plurality of information in the same region of a dot
pattern printed on a surface of a medium, such as a map or the like,
and selectively outputting the information through an imaging
operation of an imaging unit. [Means for Resolution] A dot pattern
10 that is printed on a medium to be superimposed on a map or the like
includes coordinate information and code information. Therefore,
information corresponding to the coordinate information and
information corresponding to the code information can be selectively
and repetitively output.
