

ABSORBENT ARTICLE

ABSTRACT

Disclosed is an absorbent product wherein a pair of folded portions (50a, 50b) that can be folded back is formed on both sides in the width direction of the absorbent product on portions of a flap (30). On the pair of folded portions (50a, 50b), latch members (40a, 40b) that can fasten to prescribed areas of a front waistline member (20b) or a rear waistline member (20a) are respectively disposed. The flap (30) is connected to the front waistline member (20b) or the rear waistline member (20a) at the two ends (A1, A2) in the width direction of the absorbent product. Between the two ends (A1, A2) and the folded portions (50a) and (50b), non-connected regions (D) are provided where the flap (30) is not connected to the front waistline member (20b) or the rear waistline member (20a).
