Abstract

N-(2H-INDAZOL-5-YL)PYRAZINE-2-CARBOXAMIDE DERIVATIVES AND SIMILAR COMPOUNDS AS HTT MODULATORS FOR THE TREATMENT OF HUNTINGTON'S DISEASE

The present invention refers to compounds of formula (I), as HTT modulators for the treatment of Huntington's disease. An exemplary compound is e.g. example 1: (R)-5-(3-(cyclopropylamino)pyrrolidin-l-yl)-N-(2-methyl-6-(oxazol-5-ylmethoxy) -2H-indazol-5-yl)pyrazine-2-carboxamide. The present invention discloses the synthesis and characterisation of exemplary compounds as well as pharmacological data thereof.
