(54) Title: QUERY COMPOSITION USING AUTOLISTS

(57) Abstract: A computer method and system for creating Autolists and performing querying. A server (200) stores text files. A first Autolist (201) is created and provides a relevant query definition that is used to search for corresponding data files satisfying the Autolist query definition on the server (200). A second Autolist (202) may be created to search for text files stored on the server (200) and also satisfy a second query definition. Modification of the scope of search based on modification of the first query may be automatically reflected in the scope of search for the second query.
