

Method for transporting a liquid monomer phase, removed from a storage container

Abstract

- 5 A process for transporting a liquid monomer phase which has been withdrawn from a storage vessel and comprises methacrylic monomers to an extent of $\geq 90\%$ by weight, in a tank truck or in a tanker ship, in which the liquid monomer phase is subjected to a separating operation on the route from the storage vessel into the tank of a tank truck or of a tanker ship in order to separate polymer of the monomer present in dissolved
- 10 form in the liquid monomer phase.
