- (54) Title: GAS TURBINE ENGINE MOUNTING STRUCTURE WITH SECONDARY LOAD PATHS

FIG. 1
Prior Art

(57) Abstract: A connection for mounting an aircraft engine to an aircraft pylon includes a plate to be connected to a portion of an engine, and a body that extends rearward from the plate. A back-up connection, including a pin positioned within a slotted hole, is provided between the portion of the engine and the body. When there is a normal connection between the plate and the body, there is clearance between the pin and the slotted hole.
