ABSTRACT

A core back made by stacking a plurality of strip-shaped core back segment groups made by connecting a plurality of arc-shaped core back segments 1a, 1b, 1c, 1d, 1e, and 1f, and a plurality of teeth made by stacking a plurality of tooth pieces 2a, 2b, 2c, 2d, 2e, and 2f, disposed radially inside the core back segment groups formed in an annular shape, and extending toward a center of the core back are included. Grooves 1a1, 1b1, 1c1, 1d1, 1e1, and 1f1 of a shape in which end portions of the plurality of tooth pieces 2a, 2b, 2c, 2d, 2e, and 2f are fitted individually are formed in the respective concave surfaces of the plurality of core back segments 1a, 1b, 1c, 1d, 1e, and 1f.
