(54) Title: CASPASE-14, AN APOPTOTIC PROTEASE, NUCLEIC ACIDS ENCODING AND METHODS OF USE

(57) Abstract

The invention relates to an isolated nucleic acid molecule encoding a caspase-14 polypeptide or functional fragment thereof, a vector that contains the nucleic acid molecule and a host cell that contains the vector. The invention also relates to an isolated gene encoding caspase-14, as well as functional fragments thereof. The gene or nucleic acid molecule can include single or double stranded nucleic acids corresponding to coding or non-coding strands of the caspase-14 nucleotide sequence. Isolated caspase-14 polypeptides or functional fragments thereof are also provided, as are antibodies that specifically bind thereto. In addition, the invention relates to methods of identifying compounds that modulate caspase-14 activity.
