(54) Title: DETERMINING RISK OF VAGINAL INFECTION

(57) Abstract: The present invention relates to a system for in vitro determining the risk of vaginal infection in a subject, said system comprising a) means for specifically detecting in a vaginal sample of said subject: i. Candida albicans; ii. Gardnerella spp.; iii. Prevotella bivia; iv. Lactobacillus iners; and v. at least one of lactobacilli belonging to the Lactobacillus acidophilus complex, and lacticaseibacilli belonging to the Lacticaseibacillus casei complex; and; b) wherein the system is configured to assign a status of positive or negative for each of i., ii., iii., iv., and v. based on a) to determine the risk of vaginal infection in said subject. The present invention also relates to the use of said system for determining the risk of vaginal infection and to methods of determining the risk of vaginal infection.
