(54) Title: CHILD-DIRECTED LEARNING SYSTEM INTEGRATING CELLULAR COMMUNICATION, EDUCATION, ENTERTAINMENT, ALERT AND MONITORING SYSTEMS

FIG. 3

(57) Abstract: The presented cellular-enabled integrated learning (CEIL) system provides a child novel ways to self-select and self-execute applications while requiring no intervention or supervision from the parent. Further, it provides learning, entertainment and safety by integrating cellular communication, education, entertainment, alert and monitoring systems. While providing a convenient means of communication between the child and parent, the system allows surveillance of a child's real-time environment, GPS monitoring and SIDS/health monitoring. The functionality and the physical elements of the system are programmable through installation of applications downloadable from an application store. Various options for parental access to a configuration interface to modify settings and download applications are provided, including via a cell phone, a website, customer service call center and/or the child engagement system touch screen.
