

ABSTRACT

MASSAGE HEAD AND MASSAGE APPARATUS USING SUCH A HEAD

5 The invention relates to a massage head including a casing forming an internal chamber defined by a back wall, two lateral walls, and two transverse walls, and open on its surface opposite to the back wall, and having a skinfold formed therein when the head is applied to a patient's skin.

The head is formed of two modules (50, 51) provided with means capable of enabling to
10 reversibly fasten them to each other.

Each of the modules (50, 51) integrates a functional element (10) defining one of the transverse walls of the internal chamber.
