(54) Title: LIFTING DEVICE FOR A DUNNAGE CONVERSION MACHINE

Fig. 6

(57) Abstract: A lifting device (20) for lifting and transporting a dunnage conversion machine (30) to and from an elevated position has a small footprint that allows for better maneuverability in tight spaces difficult for a forklift to access. The lifting device includes a base frame (42), an upright support (44) that is fixed relative to the base frame, and an extendable support (48) that is adjustable between a lower position and a higher position. The lifting device also includes a lifting unit (46) coupled to the extendable support to raise and lower the extendable support relative to the base frame between the lower position and the higher position. The extendable support is configured to be attached to the dunnage conversion machine by a machine interface bracket (60).
