

COMPOSITIONS AND METHODS FOR TREATING EXCESS PIGMENTATION

ABSTRACT

5 The present disclosure provides compositions comprising a polyamine synthesis inhibitor, a
tyrosinase inhibitor and a corticosteroid, for reducing excess pigmentation. Also provided
herein are methods of reducing excess pigmentation in a subject, comprising administering a
composition comprising a polyamine synthesis inhibitor, a tyrosinase inhibitor and a
corticosteroid to the subject, and uses of the claimed composition. In some examples, the
polyamine inhibitor is an ornithine decarboxylase (ODC) inhibitor such as eflornithine
10 (DFMO).
